Deep tech and robotics. Autonomous systems for extreme environments

FROM AN EARLY PROTOTYPE TO CUSTOMER BACKED PILOTS

About The Company

GI Healthcare builds autonomous cooking systems that prepare fresh, healthy meals where conventional kitchens and skilled staff cannot reach, from research stations and offshore facilities to the engineering foundations for future lunar and Martian habitats.

The Challenge

Crossing the hardest gap in deep tech, from an exciting early prototype to the commercial evidence that unlocks paid development, while securing the patient funding and specialist engineering that hardware demands.

How NEXUS Helped

NEXUS gave the founders access, not just advice, with warm introductions to customers and investors, candid commercial mentorship, and the visibility and confidence to hold conversations far larger than the company was at the time.

The Outcome

GI Healthcare moved from a low maturity prototype with no customers to a customer backed development journey, winning its first customer funded proof of concept, then a follow on development programme, and is now preparing its systems for real world pilots and TRL 7 validation.

www.gihealthcare.co.uk

GI Healthcare

IMPACT AT A GLANCE

From no customers to a customer funded proof of concept and follow on programme.

Advancing from early prototype towards TRL 7 validation and pilots.

Founders named Scotland finalists, Great British Entrepreneur Awards 2025.

> *NEXUS did not just give us advice, it helped us get closer to the people and opportunities that could move the business forward. We joined as an early stage hardware company with no customers, and today we are on a customer backed development journey preparing for real world pilots.*

Aerospace and deep tech. Advanced unmanned aircraft systems

FROM A GARAGE TO AN INTERNATIONAL ACQUISITION.

STATUS: ACQUIRED

SENTIAN AEROSPACE

About The Company

Sentian Aerospace builds modular, long endurance unmanned aircraft for the missions others cannot reach. The technology its founders developed was acquired by a publicly listed international aerospace company.

The Challenge

Turning a capital intensive, engineering led aerospace project into a credible, investable UK business, with the commercial model, IP strategy and investor readiness that a deep tech company needs.

How NEXUS Helped

NEXUS gave the founders structure, accountability and an independent commercial perspective through their UK build, pushing them to value IP, commercial validation and route to scale alongside the engineering, and standing with them through investment, restructuring and acquisition.

The Outcome

The long endurance UAV technology the founders developed, across the Xplorer and Copperhead platforms, was acquired by Volatus Aerospace, a publicly listed international aerospace company, in a completed transaction comprising firm consideration and milestone linked equity. Both founders were retained to continue developing it from the UK.

IMPACT AT A GLANCE

Technology acquired by Volatus Aerospace, a publicly listed company.

A completed exit, from UK incorporation to acquisition in under two years.

Founders retained to scale the technology from the UK.

> *NEXUS gave us structure, accountability and an independent perspective as we turned an ambitious UAV project into a commercially recognised aerospace opportunity, supporting us through restructuring and ultimately an international acquisition.*

Sector: Frontier deep tech. AI compute infrastructure and semiconductors

NEW SILICON FOR THE AGE OF PRIVATE AI.

About The Company

Auto Impartial is building a next generation AI compute architecture that lets regulated enterprises run powerful AI inference inside their own walls, without depending on scarce, high-cost data centre hardware.

The Challenge

A world class chip architect with a validated design but based outside the UK and without the local networks, funding routes or international research partners needed to take the work from proven concept towards silicon.

How NEXUS Helped

NEXUS supported Dr Huang's move to the UK and helped establish the company here, then positioned Auto Impartial inside the UK frontier technology ecosystem. NEXUS is now helping form the international consortium and shape the Innovate UK collaborative research and development bid that funds the next stage.

The Outcome

Auto Impartial is established in the UK with its core architecture independently validated and is building a UK and Asia research consortium and a costed route to silicon, targeting a global market for private AI inference that is growing several fold this decade.

www.autoimpartial.com

AUTO IMPARTIAL

IMPACT AT A GLANCE

Core compute architecture independently validated.

UK and Asia research consortium in formation with Innovate UK.

Targeting private, on premises AI inference for regulated sectors.

> *NEXUS has been helping us build international partnerships and advance our technology towards real-world deployment, creating significant value for our company's long-term growth in the UK.*

WE BUILD BUSINESSES

AI native enterprise software

AI NATIVE SOFTWARE, BUILT FOR BRITISH BUSINESS.

About The Company
DarkhorseOne is building a family of AI native tools that give UK companies enterprise grade HR, compliance and operational intelligence without enterprise cost or complexity.

The Challenge
A serious operator new to the UK market, needing to localise the product, sharpen positioning and build UK credibility and networks from a standing start.

How NEXUS Helped
NEXUS helped Jian move from a product mindset to a business building mindset, positioned DarkhorseOne within the UK innovation ecosystem, and connected him into a founder network that turned into a real commercial collaboration.

The Outcome
DarkhorseOne has grown from concept to a defined product family with a filed UK patent, a clear market position and an investor ready trajectory.

www.darkhorseone.co.uk

DARKHORSEONE
makes your business an unexpected winner

IMPACT AT A GLANCE

From concept to a defined multi product family.

UK patent application filed for its core architecture.

Commercial collaboration secured through the NEXUS network.

> *NEXUS helped me build DarkhorseOne not only as a technology project, but as a UK business, with the networks and confidence to position our AI native software for real needs.*

CreaTech

GLOBAL BRANDS, LOCAL STORIES, POWERED BY AI.

www.eco-do.com

About The Company

Eco2Life is building EcoDo, an AI enabled platform that helps brands expanding into new markets turn strategy and local insight into content and campaigns that actually land.

The Challenge

Turning a founder led consultancy into a scalable platform business, which meant UK innovation ecosystem access, funding readiness and the right research and commercial partners.

How NEXUS Helped

NEXUS acted as the operational bridge into the UK innovation ecosystem, opening routes into a leading university partnership engagement, Innovate UK grant preparation and fundraising readiness, and an international market route from Britain into Shanghai and Singapore.

The Outcome

Eco2Life has moved from consultancy to a live platform with early revenue, a UK patent application in progress and a cross disciplinary team, and is now funding and partnership ready.

IMPACT AT A GLANCE

Consultancy to a live AI platform with early revenue.

UK patent application in progress.

Routes opened into university research and innovation grant support.

> *NEXUS helped me build Eco2Life with real structure, confidence and connection to the UK innovation ecosystem, supporting my move from a founder led business to a scalable platform.*

Legal Tech

WORLD CLASS IP STRATEGY, MADE ACCESSIBLE BY AI.

www.smartpatent.co.uk

Invention Village

About The Company

Smart Patent is an AI powered platform that helps founders, universities and innovation led companies assess patentability, improve drafting quality and make smarter IP strategy decisions.

The Challenge

There was an urgent need to localise the product, sharpen positioning and build UK credibility and networks from a standing start.

How NEXUS Helped

NEXUS helped Jack move from a legal services mindset to a scalable platform model, sharpening UK market positioning and the way the business is presented to partners and investors.

The Outcome

Smart Patent is live, covering the full patent lifecycle, and has been selected as a finalist in a national AI venture programme run by one of the largest media groups in China, opening international visibility ahead of a UK and China raise.

IMPACT AT A GLANCE

Live AI platform covering the full patent lifecycle.

Finalist in a national AI venture programme.

Preparing a UK and China fundraise.

> *NEXUS gave me a supportive community, practical guidance and the perspective to develop Smart Patent from an idea into a clearer and more scalable business.*

EdTech

HELPING EVERY CHILD FIND THEIR VOICE IN THE UK CLASSROOM.

About The Company
Readii helps children who are new to English thrive in UK schools, moving them from reading comprehension through to the confidence to speak up in real British classroom life.

The Challenge
Building and scaling a real product single handed as a founder new to the UK, without a local network to draw on.

How NEXUS Helped
NEXUS gave Xiaoyu a genuine understanding of the overseas founder journey, the confidence to keep building through the hardest stages, and practical guidance for growing in the UK market.

The Outcome
Readii is live and generating real revenue, has created significant value for its UK partners, and is now expanding to reach a wider range of learner communities.

www.readii.co.uk

Readii

IMPACT AT A GLANCE

Live, revenue generating product within its first two years.

Partner value created worth around double its own revenue.

Recurring revenue year-on-year.

> *As an overseas solo founder, the hardest moments were not the business problems but the isolation. NEXUS gave me practical guidance and the sense that I was not doing this alone.*
